

HOOLDUSJUHEND KARASTATUD KLAASI JA PUITLENGIDEGA SAUNAUSTELE

Klaasi puhastamine

Mustuse ja plekkide eemaldamiseks kasutage sanitaarruumidele mõeldud puhastusvahendeid või nõudepesuvahendit. Klaaspinna lõplikuks puhastamiseks loputage see alati rohke puhta veega!

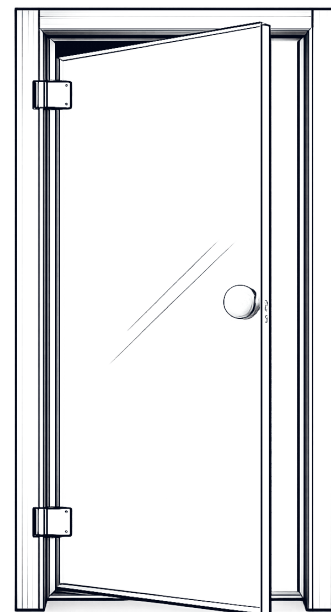

Klaasi puhastamisel ja kuivatamisel vältige teravate või abrasiivsete esemete kasutamist, kuna need võivad pinda kahjustada. Kui klaaspind jääb pärast puhastamist kuivatamata, võivad sellele tekkida katlakiviplekid. Selliste plekkide eemaldamiseks kasutage klaasi- või aknapesuvahendeid vastavalt tootja juhistele.

Puitdetailide kasutamine ja hooldus

Saunaukse puitdetailid (lengid, käepidemed ja korgid) on valmistatud naturaalsest puidust ning neid ei ole töödeldud kemikaalidega.

Puitdetailide kaitsmiseks niiskuse ja määrdumise eest soovitame neid töödelda vahetult pärast paigaldamist saunapindadele mõeldud kaitsevahendiga. Sobivad saunakaitsevahendid on saadaval enamikus ehitus- ja saunatarvikute kauplustes.

Kui puitdetailid määrduvad, võib mustuse eemaldada õrnalt lihvides. Selleks kasutage peeneteralist lihvpaperit, et säilitada puidu loomulik välimus ja pind.

MAINTENANCE INSTRUCTIONS FOR SAUNA DOORS WITH TEMPERED GLASS AND WOODEN FRAMES

Glass Cleaning

To remove dirt and stains, use cleaning agents intended for sanitary facilities or a mild dishwashing detergent. After cleaning, always rinse the glass thoroughly with plenty of clean water!

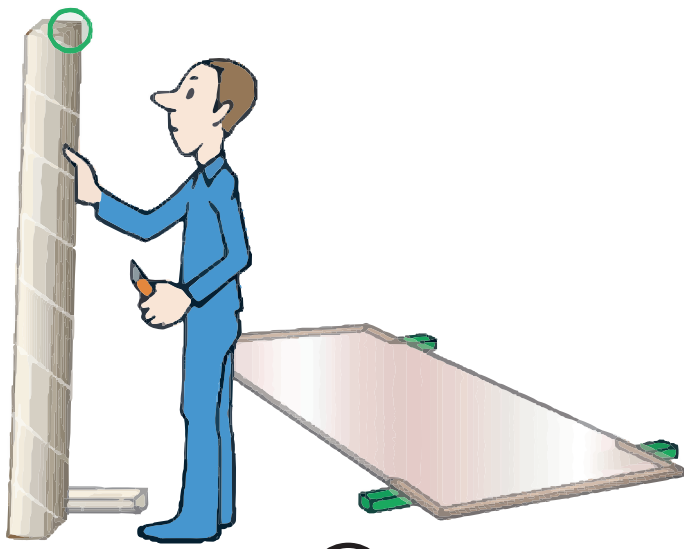

Avoid using sharp or abrasive objects when cleaning or drying the glass, as they may damage the surface. If the glass is not dried properly after cleaning, limescale deposits may form. Such deposits can be removed using a suitable glass or window cleaner in accordance with the manufacturer's instructions.

Use and Maintenance of Wooden Components

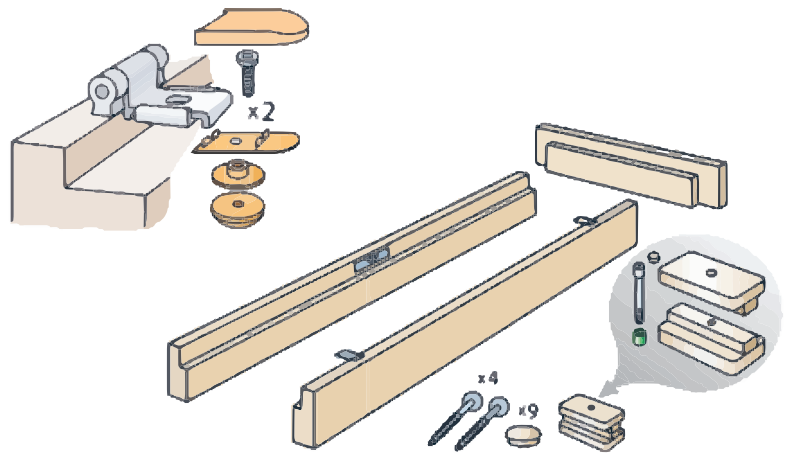

The wooden components of the sauna door (frames, handles and plugs) are made from natural wood and are not chemically treated.

To protect the wood from moisture absorption and dirt buildup, we recommend treating all wooden components with a sauna protection product immediately after installation. Suitable sauna protection products are widely available from retailers specializing in sauna supplies and building materials.

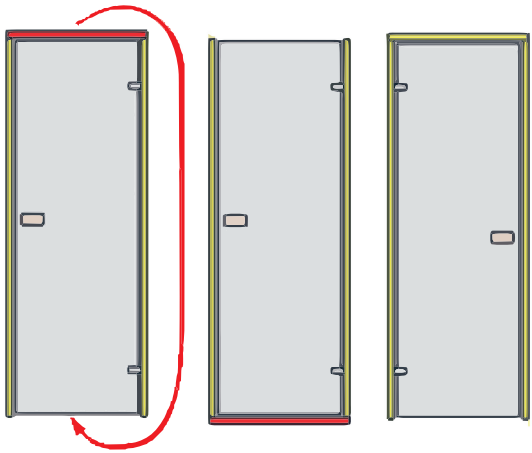

If the wooden components become dirty, the surface can be refreshed by lightly sanding it with fine-grit sandpaper. This will help preserve the natural appearance and finish of the wood.
