Industrial Wood 6.10.2008

TAPE RECOMMENDATION TO PAINTS

According to our tests the tapes mentioned below are the best recommendations to use on painted substrates (with one component acrylic paint):

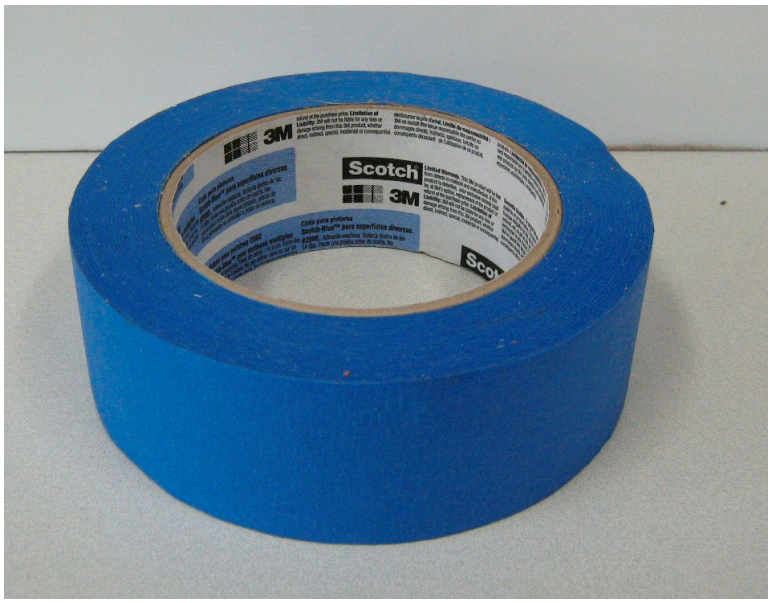

1. Scotch 2090-2 (3M),masking tape
2. Prof masking tape
3. Scotch (3M) construction tape
4. Tesa 4334, precision masking tape
5. Tesa 5258, masking tape for outdoors

All tapes should be removed directly after the construction has been done. Also we recommend that the taping should be made on the frame of doors and windows, and not on the visible side so that the potential damages are easier to fix.

With best regards,

Teknos
